4. The method of claim 2 wherein the second category is a leaf category of the second hierarchy of categories

5. The method of claim 1 including defining the second category to point to the first category.

6. The method of claim 2 wherein the defining of the second structure includes defining the second hierarchy such that navigation of the second hierarchy to locate data items classified as being attributed to the second category locates data items classified as being attributed to the first category of the first hierarchy.

7. The claim of 1 wherein the data item is user classifiable under the first structure of categories and is not user-classifiable under the second structure of categories.

8. The method of claim 1 wherein the data item is directly categorized as being within the first category of the first structure of categories and is indirectly categorized as being within the second category of the second structure of categories.

9. The method of claim 1 wherein the definition of the first and second structures of categories includes defining a category table including a

category record for each category of the first and second structures of categories, each category record within the category table including a category identifier, wherein a category record that describes the second category includes a category identifier of a category record for the first category.

10. The method of claim 1 wherein the data item is a database record describing any one of a group of products and services of a transaction facilitated by a network-based transaction facility.

11. The method of claim 1 wherein the network-based transaction facility is a network-based auction facility.

12. The method of claim 1 including defining a third structure of categories to provide a further alternative classification of the data item, the third structure including at least a third category, wherein the third category is associated with the first category of the first structure of categories.

13. The method of claim 1 wherein the first category comprises a first category path defined in terms of the first structure of categories and the second category comprises a second category path defined in terms of the second structure of categories.

[illegible]

automatically attributing a second category, of a second hierarchy of categories, to the data item.

16. The method of claim 14 wherein the first category is attributed to the data item by a user during a user classification operation and the second category is dynamically attributed to the data item during a user navigation operation of the second hierarchy of categories, wherein the dynamic attributing of the second category is performed by identification of an association between the first and second categories.

17. The method of claim 14 wherein the first category is directly recorded within the database as being attributed to the data item and the second category is recorded as being linked to the first category within the database.

27. The method of claim 20 including communicating the identified data items within a markup language document transmitted over a network

28. A machine-readable medium storing a sequence of instructions that, when executed by a machine, cause the machine to perform the steps of:

identifying a first category, of a first hierarchy of categories, attributed to a data item; and

automatically attributing a second category, of a second hierarchy of categories, to the data item.

29. A machine-readable medium storing a sequence of instructions that, when executed by a machine, cause the machine to perform the steps of:

facilitating user-navigation of a first category structure to select a first category;

identifying a second category of a second category structure as being linked to the first category of the first category structure; and

identifying data items of the second category responsive to the

selection of the first category of the first category structure.
